

The Neuroscience and Aging Lab, at the Tufts University JM USDA HNRCA is looking to recruit a postdoctoral investigator interested in studying the role of standard of care medicine in combination with nutrition and nutrient therapies to prevent and treat neurodegenerative diseases and cancer. Disease-specific in vitro and in vivo avatars are studied in relation to stem cell biology and regenerative medicine as a means for better preventing and treating age-related neurological disorders. We are seeking a dedicated researcher with experience using biochemical (e.g. HPLC, MS), genetic and molecular profiling, and cell culture and in vivo models for studying normal and pathological brain processes. For more information, or for applying for this position, please contact Dr. Dennis Steindler at [Dennis.Steindler@Tufts.edu](mailto:Dennis.Steindler@Tufts.edu).
